PARTNER SUCCESS STORY

Strengthening Secure Banking Infrastructure Together.

How ProceDo and Magellan deliver trusted HSM solutions for major financial institutions

Executive Summary

Strong partnerships are essential for securing today's digital financial services.

By combining Adyton, Magellan's trusted Hardware Security Module (HSM) with ProceDo's integration expertise, the two companies help financial institutions protect their most critical cryptographic assets and security-sensitive banking operations.

Together, the partners support one of Belgium's largest financial institutions, providing a highly secure HSM infrastructure that safeguards online banking, payment services, and ATM environments. The collaboration demonstrates how trusted technology, local expertise, and close cooperation enable customers to meet demanding security, availability, and compliance requirements.

About ProceDo

ProceDo is a technology integrator that combines intelligent automation with cloud-based AI agents to build scalable solutions that transform how organizations capture, understand, and manage information.

By combining process expertise, cloud AI capabilities, and seamless integration with enterprise platforms such as ERP and CRM systems, ProceDo designs tailored solutions that support customers throughout their digital transformation journey - from initial consulting and solution design to successful implementation.

The company primarily serves organizations in banking, insurance, public administration, telecommunications, and industry.

The Partnership

Magellan and ProceDo have built a long-standing partnership focused on delivering trusted cryptographic security solutions to organizations operating highly regulated environments.

Working alongside a leading managed services provider, the partners support one of Belgium's largest financial institutions, where Magellan's Adyton HSM serves as the cryptographic root of trust for business-critical banking services.

Within the partnership:

- Magellan provides the certified Hardware Security Module technology
- ProceDo contributes its technology integration expertise and customer engagement
- The managed services partner operates the HSM infrastructure as a managed service

Together, the partners deliver secure, resilient, and scalable cryptographic infrastructures that support secure online banking, payment processing, authentication services, and ATM operations.

The Challenge

Financial institutions face continuously evolving cyber threats while operating under strict regulatory requirements and demanding service-level expectations.

Their cryptographic infrastructure must provide:

- Protection of highly sensitive cryptographic keys
- Continuous availability of critical banking services
- Operational resilience for 24/7 environments
- Compliance with financial security regulations
- A secure path for technology modernization without business disruption

Meeting these requirements requires more than robust technology - it demands trusted partners with deep expertise and a collaborative approach.

The Solution

Magellan's Adyton HSM forms the hardware-based root of trust for security-critical banking applications. Within a recent infrastructure modernization project, the HSM platform supporting the customer's ATM environment was successfully refreshed, ensuring continued protection of critical banking services while maintaining uninterrupted operations.

> The solution secures cryptographic operations across online banking, payment processing, authentication services, and ATM infrastructure, providing the scalability and resilience required for mission-critical financial environments.

Close collaboration between Magellan, ProceDo, and the managed services provider ensured smooth planning, implementation, and long-term operational continuity.

Why ProceDo partners with Magellan

For ProceDo, selecting the right technology partner is about more than product capabilities. It requires trust, responsiveness, and the confidence that customers can rely on secure solutions for years to come. **Magellan's Adyton HSM forms the hardware-based root of trust for security-critical banking applications.**

This close cooperation enables both companies to respond quickly to customer requirements, successfully deliver complex projects, and continuously strengthen their position within the Belgian financial sector.

From ProceDo's perspective, Magellan stands out through:

- Proven HSM technology with a strong installed base in the Benelux financial sector
- Reliable products designed for mission-critical environments
- Fast response times and direct access to technical expertise
- Flexible and pragmatic collaboration throughout projects
- Local development and manufacturing in Belgium
- A long-term partnership built on trust, transparency, and shared customer success

Results & Benefits

For Customers

- Highly secure protection of cryptographic keys and sensitive banking operations
- Trusted HSM infrastructure for online banking, payment, and ATM services
- High availability and operational resilience
- Support for regulatory compliance
- Scalable security platform ready for future business growth

For ProceDo

- Access to proven HSM technology from a trusted European manufacturer
- Close collaboration with an experienced and responsive technology partner
- Ability to deliver complex, high-security projects with confidence
- Strengthened presence within the Belgian banking market

For Magellan

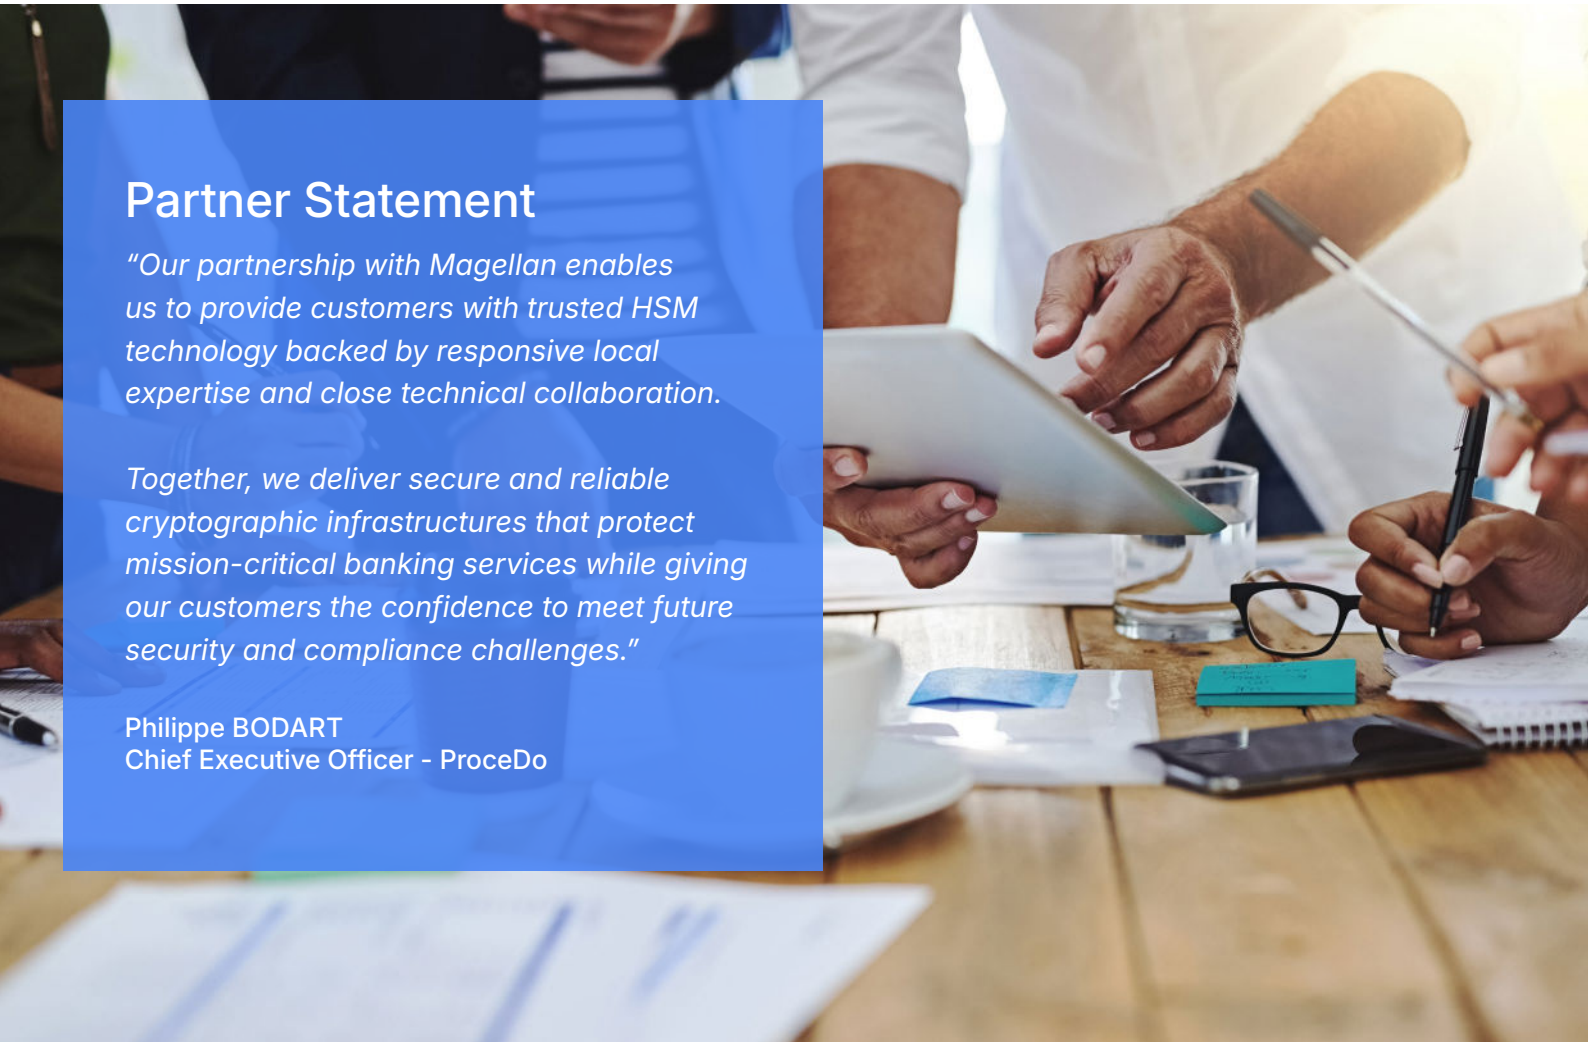

- Strong partnership with an experienced technology integrator
- Successful deployment in one of Belgium's largest financial environments
- Demonstration of the scalability, reliability, and long-term value of Magellan's Adyton Hardware Security Module

Looking Ahead

As cyber threats continue to evolve and financial institutions accelerate their digital transformation, trusted partnerships become increasingly important.

Magellan and ProceDo remain committed to helping customers build resilient cryptographic infrastructures that protect critical banking services today while preparing for tomorrow's security challenges.

Together, the partners continue to deliver trusted security solutions that combine proven technology, local expertise, and long-term collaboration.

Partner Statement

"Our partnership with Magellan enables us to provide customers with trusted HSM technology backed by responsive local expertise and close technical collaboration.

Together, we deliver secure and reliable cryptographic infrastructures that protect mission-critical banking services while giving our customers the confidence to meet future security and compliance challenges."

Philippe BODART
Chief Executive Officer - ProceDo

Magellan is an international Consulting and Technology group helping organisations transform vision into action, in a rapidly evolving world. Operating in 13 countries, the group is a unique player in Europe, capable of offering integrated support to public and private sector clients across all areas of Consulting, Technology, integration of major SaaS platforms, and the creation and operation of custom digital solutions 24/7 on public cloud, private cloud, sovereign cloud & SecNumCloud.

VISION IN ACTION
